TABLE LEG GRIP

Table legs Grip are able to turn every material, thick or thin, old or new, into a table.

Timeless, a pure and elegant detail on your table made of high quality materials.

Some older tables have stunning wooden table tops, but unpractical or old-fashioned legs. You can use Grip to reuse this table top that you are attached to. Even old doors can be used. Re-using creates a great contrast between the weatherworn material and the shiny and smooth legs.

Are you seduced by another great material? No problem, table leg Grip turns everything into a table.

The table legs are completely made of a high standard stainless steel, they are made with attention to every detail. The dimensions of 1 table leg are 13x5cm (WxD), the height is adjustable.

Designed by Bas van Leeuwen & Mireille Meijs and produced by our metal working place near Eindhoven, The Netherlands. Every step of production from the first sketches to the final finished product is completed with care and the highest standards in mind with attention to every detail.

TABLE LEGS GRIP + BAMBOO SIDE-PRESSED THERMO TABLE TOP
